

# TATA POWER EV ANALYTICS

Performance Dashboard: Bengaluru EV Infrastructure  
August – December 2024

# Executive Summary: H2 2024 Performance

TOTAL SESSIONS

**1,14,000**

Aug-Dec 2024

TOTAL REVENUE

**₹4.96 Cr**

Sum of total\_cost (₹4,96,93,947)

TOTAL KWH DELIVERED

**28.59 Lakh**

Sum of kWh charged (28,59,772)

ACTIVE STATIONS

**65**

Across 18 districts

REGISTERED CUSTOMERS

**8,000**

Avg 14.25 sessions each

TOTAL PLUGS COUNT

**390**

Total available charging points

# Top 5 Districts by Charging Sessions

Indiranagar leads the Bengaluru district, closely followed by Rajajinagar and Jayanagar. High density in these commercial/residential mixed zones drives utilization.

# Monthly Session Trends (Aug - Nov)

Sessions peaked in October at 39,606, likely due to festival travel. A sharp, anomalous drop occurred in November (8,970 sessions) which requires immediate operational investigation to determine the cause (e.g., data ingestion failure, major network outage).

# Customer Segmentation: Income Tier

- Low-Mid Tier (49.9%)
- Mid-Range Tier (35.3%)
- High Tier (14.9%)

## Key Insight:

85% of our registered customer base falls into the Low-Mid or Mid-Range income tiers. This indicates strong mass-market adoption of EVs in Bengaluru, moving beyond early affluent adopters.

# Average Revenue vs. Total Revenue by Operator

While overall market average revenue sits around ₹99.3L per operator, Tata Power is currently slightly below average at ₹95.1L, trailing ChargeZone and Ather Grid in the Bengaluru operational area during this period.

# Infrastructure Investment Pipeline (98 Projects)

High Priority

54

Majority of our active pipeline is classified as High Priority, ready for immediate deployment to meet growing demand.

Medium Priority

7

Projects pending secondary site approvals or awaiting grid load feasibility studies from BESCOM.

Low Priority

37

Long-term strategic sites held for future expansion once EV density in those specific micro-markets increases.

# | Policy & Subsidy Alignment

55

**SUBSIDY ELIGIBLE STATIONS**

## FAME-II & State Policy Support

Out of our 65 active stations, 55 are fully eligible and compliant with FAME-II and Karnataka State EV policy subsidies.

- ✓ This high compliance rate significantly reduces our capital expenditure burden and improves ROI on infrastructure deployment.

# Charger Type Distribution

## Hardware Mix Optimization

Our current deployed network (totaling 390 plugs) favors standard AC and basic DC fast charging to cast a wide net.

AC LEVEL-2 (22 KW)

**32%**

DC FAST (50 KW)

**32%**

AC LEVEL-2 (7.4 KW)

**27%**

DC ULTRA-FAST (150KW)

**7%**

*Note: DC Ultra-Fast represents a significant opportunity for future premium charging expansion.*

# Strategic Recommendations

## Immediate Operational Actions

- **Investigate November Drop:** Audit network logs to determine why sessions crashed to 8,970 in November compared to the ~39k October peak.
- **Competitive Pricing Audit:** With revenue trailing Ather and ChargeZone, review our per-kWh pricing and subscription models to ensure market competitiveness.

## Growth Opportunities

- **Fast-Track High Priority:** Accelerate deployment of the 54 High Priority projects to capitalize on the established mass-market adoption.
- **DC Ultra-Fast Expansion:** Increase the ratio of 150kW chargers (currently only 7%) in premium corridors like Indiranagar and highway exits to attract high-end EVs and commercial fleets.

# Questions & Discussion
